

ABSTRACT OF THE DISCLOSURE

The present invention relates to a data recording method for enabling a digital television to present a part of digital stream recorded in a disk such as a high-density digital versatile disk (HD-DVD) as a still picture, and a method for providing a digital television with still information based on the recorded data stream. The method includes writing, in the data area, a stream including at least one still picture and at least one presentation information, a presentation of the still picture being defined by the presentation information, and writing, in the navigation area, information associated with the existence of the still picture in the stream.
